Profile

I'm a Python developer who's been vibing with computers since before it was cool. Over the last decade, I've built clean, scalable code, automated all the boring stuff, and fine-tuned Windows environments like second nature. I love writing code that works, feels good, and makes life easier whether it's a lazy CLI tool or a sleek API. If it's Python, I'm in. If it's Windows, I probably tweaked it. I also enjoy collaborating with others. For me, the best part is the working as a part of the team and discussing those ideas together. I also enjoy offering up what I am thinking for others to process and consider. To be fair, there is always new information to learn with all of the technology on the road ahead.

Employment History

Python, Freelance

October 2020

- Developed Python scripts for automation, file management, and task optimization across various personal and client projects.
- Collaborated with clients to understand basic requirements and deliver lightweight, functional Python-based solutions.
- Maintained clean, readable code with proper documentation for long-term usability.

Data Entry, Freelance

July 2024

- Entered, organized, and maintained data with high accuracy and attention to detail using tools like Microsoft Excel, Google Sheets, and custom forms.
- Assisted clients with data migration, formatting, and cleanup tasks for reports, websites, and CRMs.
- Delivered error-free outputs under tight deadlines, ensuring data consistency and structure.
- Handled repetitive tasks efficiently by identifying patterns and applying basic automation techniques where applicable.
- Maintained confidentiality and data integrity throughout each project.
